Memo to File:

Re: Minerals Recovery Corporation
South Lisbon Mine
ACT/037/018

On December 7th, 1977 this operation was inspected by Ron Daniels, Mike Thompson and Jim Smith. They were accompanied by Mr. Carl Lipp, the mine foreman for Minerals Recovery Corporation.

The property in question contained four (4) active portals: the SL-1 adjacent to the old Keystone-Wallace pit and the Redrock, Divide, and West Inclines. The Mayfield Incline portal is currently inactive and may be used for ventilation purposes.

Since the old existing dumps are being redisturbed for current ore and waste rock stockpiles. The Division informed Mr. Lipp that Minerals Recovery Corporation would have to regrade and revegetate the dumps.

Mr. Lipp was informed that the Division required a map of the mine and showing contours, access roads, and locations of all portals, dumps, stockpiles, and surface facilities. He said that Minerals Recovery Corporation would comply with the request.

A letter will be sent to Mr. Erick Newman, President of Minerals Recovery Corporation regarding the maps. MR Form 1 and 2 will also be returned for addressing Brian Buck's comments in a previous letter which were neglected, and obtaining the required signatures and notarization.
